**Marge think caresit no1 is page**

what the hell are you talking about!? ha ha ha I have never once brought up the bible! you guys are so damn insane and emotional. I did not once bring up the bible. You evolutionist seem to bring that up more than anyone. Oh my there's human hybrids? wow this is new to me. I hope you don't think neanderthals are hybrids.

**Actors**

LOVA  
ALEXANDR  
ABEDI  
HISHAM  
TUMAINI  
NESTOR  
HARI  
AFAAFA  
ZATI  
EVELYN  
KAMILA  
ERCAN  
**Scene 1**

AFAAFA: @TwinpactIt's 'cause a lot of us are American (me included). And you can always trust Americans to do the right thing... once, of course, they've exhausted all the alternatives. I didn't quote that because I don't think I got it exactly right.

ERCAN: Okay, okay, fine. I'm sorry, I just forgot what comes before Australopithecus since my specialty is microbiology, but what if some omnipotent guy (like God) mediated evolution with a wave of his 45° wedge.

ZATI: Unfortunately logic would prove that such a being cannot being all powerful. After all, if cannot make itself cease to exist : If it can, then it is not omnipotent for it ceased to exist. If it cannot, it is not omnipotent for it still exist. Also saying it is a He remove the "only one god" clause for using He implies it has a gender, and a gender means an opposite gender for reproductions, and thus, other deities. Better luck next time.

LOVA: Come down to this planet! There's this new thing that everyone's hyped up about.... It's called the third grade.

AFAAFA: Well... maybe if his foot just randomly were to, I don't know, squash the cockroach? If anyone insults me for the lack of a subject in the previous sentence, I will personally make your life a veritable hell.

NESTOR: We all acknowledge that humans invented their own spoken language, right? So how would an omnipotent God know our language before we invented it? I mean, he supposedly spoke to Adam and Eve.

EVELYN: @LacocacolamanYou leads to Star Wars reference. Conjugation problems were intentional.

ZATI: @rui444 Actually, religion did SOME good. It served as a space filler between the Neanderthals

and the invention of microscopes/telescopes.

LOVA: the one i saw, when he sat down, marge asked "did you get the milk?" ... "DOH!"

ERCAN: The best Simpsons intro.

EVELYN: not sure that's called evolving...

ZATI: @TheENoize not sure that's called evolving...

AFAAFA: no, i think its called 'homervoloving' XD

TUMAINI: hahahahahahaahahaha very fun

TUMAINI: hhahahhahahahahaha moe xD

ZATI: watch?v=Bc0pKUHC0X4

HISHAM: watch?v=Fn3y9m9lDgc

AFAAFA: HAHAHA "what took you so long?" LLOL

ABEDI: Hehe i likeid

AFAAFA: lmao at moe full evolves back wards

EVELYN: moe is the best... :D

NESTOR: i like it when homer eats lenny XD

HARI: there was a similar intro to a Simps episode in which you pass to microscopic scale (sun, planets, galaxies etc.) through macroscopic (cells, atoms etc.) just to discover you are in a loop and that atoms are other universes...does anyone have the link?

NESTOR: want The Simpsons in h-quality, enjoy here:TVFLAP . COM

ABEDI: i loled when moe de-evolved

ZATI: DON'T!

ABEDI: ಠ\_ಠ (ಠ\_ಠ) ಠ\_ಠ post that if you think the new youtube sucks 16 hours ago

NESTOR: ಠ\_ಠ (ಠ\_ಠ) ಠ\_ಠ post that if you think the new youtube sucks.

EVELYN: what took you so long?Ugh (evolution)

LOVA: "What took you so long?" "I dunno, maybe I had to wait for millions of years of evolution to do it's thing! Ugh."lol

AFAAFA: Siiicckkk !!

HISHAM: lol spore homer!

ZATI: What's the song titled? I'm referring to the one playing in the background.

ZATI: ಠ\_ಠ (ಠ\_ಠ) ಠ\_ಠ post that if you think the new youtube sucks

AFAAFA: ㄱㄴㄱ (☹\_☹) ㄱㄴㄱ post that if you think the new youtube sucks

ABEDI: hehehehenice videon.n

LOVA: ㄱㄴㄱ (☹\_☹) ㄱㄴㄱ post that if you think the new youtube sucks

AFAAFA: ha ha! at 0:34 and 1:00!

NESTOR: ㄱㄴㄱ (☹\_☹) ㄱㄴㄱ post that if you think the new youtube sucks

EVELYN: ㄱㄴㄱ (☹\_☹) ㄱㄴㄱ post that if you think the new youtube sucks v

KAMILA: ㄱㄴㄱ (☹\_☹) ㄱㄴㄱ post that if you think the new youtube sucks

ZATI: the beginning was the best ^\_^

ZATI: ㄴㄱ (☹\_☹) ㄱㄴㄱ post that if you think the new youtube sucks

LOVA: ㄱㄴㄱ (☹\_☹) ㄱㄴㄱ post that if you think the new youtube sucks

HISHAM: ㄱㄴㄱ (☹\_☹) ㄱㄴㄱ post that if you think the new youtube sucks

HISHAM: ㄱㄴㄱ (☹\_☹) ㄱㄴㄱ post that if you think the new youtube sucks

TUMAINI: ㄱㄴㄱ (☹\_☹) ㄱㄴㄱ post that if you think the new youtube sucks

LOVA: ㄱㄴㄱ (☹\_☹) ㄱㄴㄱ post that if you think the new youtube sucks

TUMAINI: ㄱㄴㄱ (☹\_☹) ㄱㄴㄱ post that if you think the new youtube sucks

ERCAN: ㄱㄴㄱ (☹\_☹) ㄱㄴㄱ post that if you think the new youtube sucks

ERCAN: ㄱㄴㄱ (☹\_☹) ㄱㄴㄱ post that if you think the new youtube sucks

ABEDI: perfect intro, perfect moe :D

AFAAFA: moe evolves..... "BACKWARDS"!~

KAMILA: also known as de-evolution

KAMILA: wow thts so cool!

ERCAN: ㄴㄱ (☹\_☹) ㄱㄴㄱ post that if you think the new youtube sucks

## Scene 2

ALEXANDR: this so needs Fatboy Slim - Right here , right now

ERCAN: watch -> The Simpsons in hd and enjoy your time at:TVFLAP . COM

ZATI: These "homocytes" are real cute~~~~

AFAAFA: One of my favourite Simpson intro~~~~

LOVA: lol @ mo going wrong way, one of the best intros they done

EVELYN: wow that was awesome!

TUMAINI: ಠ\_ಠ (ಠ\_ಠ) ಠ\_ಠ post that if you think the new youtube sucks

HISHAM: LMFAO, i gotta get some air, be for die of laugh. evolved from dinosaurs. yo that shit had me rolin'. what esle sexual trasnmitted diseases. lol

ALEXANDR: Voted down because of all the stupid hulu ads. Advertising hulu is fine, but that was simply ridiculously over the top. Do it before or after the clip, not during it.

ALEXANDR: BEST INTRO EVER!!!!!!!

ALEXANDR: rip lenny

HISHAM: Fossil record clearly shows that organisms speciate over time. Homologous organs and genetic studies show clear DNA links between different species. For example, the 23rd chromosome in humans is a fusion of the 23rd and 24th in apes, showing that we shared a common ancestor, but OUR ancestor had a mutation which fused the chromosomes, partly leading to a new species (us)

EVELYN: so true, i know how i got here. my momma told me so that came from a bomb, and over time it evolved all life form first the dinosaurs, then hunams. we evolved from a rock, backteria, sexual trasnmitted diseases, roachs, rats, bananas, trees, cocaine,plastic materials, metal material, even are pets. i know mommie told me so, even dexter from cartoon net work.

TUMAINI: That is a gross and obscenely cavalier twisting of evolution. No scientist has ever claimed we evolved from rocks, dinosaurs, STDs, roaches, rats, bannanas, trees, cocaine, etc.

ALEXANDR: not true

EVELYN: Want to back that up with evidence?

ALEXANDR: listen closely, when the cells split and say "doh" it sounds like "Ghetto" XD

ALEXANDR: FUNNY MAN .. !!

HISHAM: i'm not an expert on the technical aspectsdo some research yourselfit's not really something you can explain in youtube comments

ZATI: @rui444 wow, insanity...

AFAAFA: evolution defies religion. Where is your bible now christians ?

TUMAINI: creationists are like moe.. going in the wrong direction in terms of evolution

HISHAM: too true,holding back society with blind illogical belief

ABEDI: there is nothing logical about belief if a non-existent god

EVELYN: well yes, but it's very misleading to say cause the religious nuts look at it as we evolved from a gorilla or something.

ERCAN: i hate the new layout

KAMILA: hahas moe

LOVA: meehreally bored and cute ^^.. Anyone want to chat or swap pics

HARI: COOL AND TRUE AT THE SAME TIME

HARI: 0:10 dope!0:33 lol!

EVELYN: check out my cartoon guys!

ERCAN: I like when Mr. Burns his homer in the back with his tentacle and he screams lol

EVELYN: ha ha

KAMILA: what's this song's name?

TUMAINI: what's this song's name?

HISHAM: good point! I actually feel that science and the Bible support each other. Science actually proves and helps one to realize it's reliable facts and trustworthiness and the Bible shows some scientific facts and laws before they were seriously studied, known and understood.

HARI: This is like on Fantasia

ALEXANDR: lol

LOVA: lol i got to watch this at school b/e it had to do w/ evolution...lol

LOVA: ajajajajajajajaajajajajajaajajaja muy buenoooooooooooo

KAMILA: i saw this a copule days ago

HARI: lol bart and lisa dinosores lol fighting

ALEXANDR: This is strangely like Spore

AFAAFA: nice!

ERCAN: This would have made Carl Sagan very proud indeed.

ERCAN: Lol@lenny

NESTOR: @rui444 ha ha ha. what's your problem!?! you're the one who made a comment about God. why would you bring it up if you don't care!?! You brought it up because you do care. you sound like such a whining baby, get over yourself.

ZATI: this is epic!

TUMAINI: Homer looks strangely cute as that little rat thing

ZATI: hahahamoe evoluating backwardsand marge 'what took you so long' hahaha

### Scene 3

NESTOR: you mean evolving backwards?

AFAAFA: yea sorry i'm not english

ERCAN: it's cool bro, I'm not either lol.

KAMILA: lol

ALEXANDR: I like simpsons and shows like this, so I watch it HQ it at:TVFLAP . COM

EVELYN: lol

LOVA: 0:58 lol

ZATI: LMAO Y did moe get uglier

TUMAINI: COPY AND PASTE IF YOU HATE THE NEW YOUTUBE LAYOUT!\* ㄱㄴㄱ (▶\_◀) ㄱㄴㄱ  
W.T.F. Youtube?!

ALEXANDR: yes we started out as single celled organisms which then multiplied forming more complex fish organisms, which then slowly generation by generation evolved to apes then to us humans were not around at the start of lifeFACT

HISHAM: wrong, Humans didn't evolve from apes but rather from a common ancestor

NESTOR: ape is classification containing multiple species such as chimpanzees and gorillas our common ancestor was another form species of ape

ALEXANDR: fact my ass. there are so many parts in the body especially in the lungs. that prove that we cannot have evolved. parts that need to be complete from the beginning.

ZATI: Great Homer

KAMILA: Moe's devolution xD

ALEXANDR: 1:06 beard on top of beard (Y)

HARI: Lenny dragonfly LOL

LOVA: @rui444im very confused because i could have sworn your knowledge of right and wrong came from God? Where does morality come from if not from God?

ALEXANDR: Evolutionary memory and the social contract. Basically, as our species evolved, we began to realize that not killing one-another might be the best way for our civilization to thrive. We developed a negative chemical response to actions that are bad for our own evolution, as well as those of other men - fear (for our own survival) and conscience (for the better of our species). We each subconsciously uphold a social contract based on these fears and negative feelings, so we may all live freely.

KAMILA: really is there any evidence for this or is this all speculation? Also if natural selection has been working perfectly why would us humans change the method?

ERCAN: We do not need natural selection no more. Almost anyone in the rich society survives. Even if they have "bad" genes. BTW seen idiocracy? XD

LOVA: which is part?

KAMILA: lol @ Moe

HARI: That's exactly like "Fatboy Slim - Right Here Right Now" go look it up ; )

AFAAFA: hate to spam, but i need to invite people to lockerz . com.... I promise to sub, and 5 star all your videos, pm me.

LOVA: LOL'D at 0:33

ZATI: .lifeclckz in here you can get cool stuffs totaly free ! just write to my email and i will send you invite , hurry up ! vaidotaslipskas@gmail. com (gmail. com without space)P.S. it's better then lockerz

NESTOR: Hands down! The best episode of simpsons is the one Bart and Lisa travel to different dimensions. You remember that?I dont care what season it is and i dont give f\*\*k, just watch the video, I've uploaded to here:[bit\(.\)ly/simpsons-episode](http://bit.ly/simpsons-episode)(redirecting to mediafire link)

ERCAN: limiting the gene pool would be opposite to evolution. it increases the chance for interbreeding. the loss of information would get rid of some necessary genes the previous generation had, and it may result in extinction. and yes, microevolution exists. I can observe, test, repeat, an experiment in which a bodybuilder increases his bone density, and remains a human! because he has limits.

HARI: what are you talking about? limiting the gene pool would lead to interbreeding? i think you mean inbreeding. i'm sure you know something about that. your bodybuilding example shows you know NOTHING about evolution.a bodybuilder increasing his mass through exercise has nothing to do with evolution. he won't pass his increased bone density to his offspring. he is merely exploiting the natural plasticity of muscle and bone. you get an F. i really cannot believe how stupid you are.

HARI: how do u explain Albers-Schonberg disease, marble bones disease, osteopetrosis? lol and ur right. it has nothing to do with evolution! yay i'm finally getting through to u!

LOVA: Ha, that's still a million times more likely to happen than the creationist fallacy that women were made from the rib of a man... =0

AFAAFA: yeah and fish evolve legs, muscle, and lungs. we both have faith in something. It's just too bad evolution has no science. All I say is that Everything reproduces after its kind. I guess you can say I don't have the imagination for evolution. I guess I like to have science back up my claims.

NESTOR: Yah all the great minds like the guy who wrote the hitchhikers guide to the galaxy!

ERCAN: doas anybody know th song homer,carl and lenny sing when they are children and walk on the railroad when homer is scared by the bones of mr smithers senior?

ZATI: there can be a god

HARI: Anyone getting upset over a cartoon needs to have their head examined. Shut up and have fun, like it was intended.

ABEDI: , just a couple quick points, there is no such thing as scientific fact. However evloution is as close as it gets. The human ape hybrids you speak of do not exist. There are ape like ancestors, and human ancestors that shaved up and put in a suit would not get much of a second glance standing on a sidewalk. Some, not human had tools fire and buried their dead. There is a written 6000 year history.

TUMAINI: LOL

ABEDI: funny video

KAMILA: oh my god!!! 0:32

ALEXANDR: i really, really, REALLY want to punch this lacocolaman in the facer you with me on that?

LOVA: well, a punch would be a little too strong. a good hard bitch-slap would do the trick.

ALEXANDR: lol moe got owned

ABEDI: they think he's turning into a whale LMAO!

HISHAM: wo cares if they put a godzilla roar?

HARI: @rui444Fear is the path to the dark side. Fear leads to anger. Anger leads to hate. Hate leads to suffering. I feel sorry for you, I really hope one day you wont regret it.

TUMAINI: That is a huge oversimplification, but in the long run? Yes, yes we did.

LOVA: Is that litte dragonfly lenny?

NESTOR: hahahaha

HISHAM: haha nice, really enjoyed this video!

ERCAN: W0w nice!

EVELYN: well at least you are subtle in your criticism

LOVA: fuck you , fuck your mom , dont touch allah , god and bible you some sonofabitch , and you idiot god and allah are the same -- its just in different names idiot , anyways you mom sucks and you can count yourself a monkey or some 1 celled organism , no one gives a fuck about what you think , you dont believe , then dont but dont insult the believers , its not you'r rite , its not you who decide , as you insult allah and god , you just proove that yournt sure about that god doesnt exist ...ashole

#### **Scene 4**

ABEDI: Wow, so many typing errors in your comment!

ABEDI: fail xD

HISHAM: The Simpsons watched in HQ last episode, will watch missed episodes too, at :TVFLAP . COM

ABEDI: Epic...

HISHAM: Great Video, very funny. Oh and as for the pathetic spamming down below my comment, seriously, go prove yourselves right on a forum or IM, and get your pretentious asses out of here spamming up this comment section, idiots there is a time and place, this is neither.

TUMAINI: seriously m8 y type all that crap when no1 caresit was good!!!

ALEXANDR: did i just quote someone? omg -\_- i must be like unworthy of your attention! i hope you can forgive me dear reader, i bless you and your allmighty knowledge.

ERCAN: omg homer pwns you no matter how much you write on youtube

ERCAN: @thyrozion ha ha, I like how someone gave you a big thumbs down because you told them to "think"

LOVA: yes so much proof you are usng herewe back things up with TRUE evidence which proves the bible wrongyou simply say "but jesus?..." but the bible says?"evolution has the greatest minds in the world backing itit is scientific FACTwhy can we find samples of human-ape hybrids from thousands of years ago?how come the samples found become more human as they come closer to our time?why can't

we find samples of humans dating back 5000 years if we started exactly as we are now?

ABEDI: what the hell are you talking about!? ha ha ha I have never once brought up the bible! you guys are so damn insane and emotional. I did not once bring up the bible. You evolutionist seem to bring that up more than anyone. Oh my there's human hybrids? wow this is new to me. I hope you don't think neanderthals are hybrids.

HISHAM: 1. ok if not for a religion why don't you believe in obvious fact 2. insane and emotional? by your definition insane is requiring proof for a belief in the formation of our species? not just denying fact blindly. 3. yes human/ape hybrids effectively the half way points shown in skeletons and other fossilized sample which are half way between human and ape evolution IS fact it HAS been proven if you deny it then you are either a blind fanatic or a plain moron

ALEXANDR: you make a valid point but that doesn't disprove the theory of evolution at all

TUMAINI: Uhh...

ZATI: really religious people don't like evolution because it implies that if you think the way i do god has no real form if you think about it and also because the fact is people are so quick to hold up the laws of god they forget to hold up their own laws instead that's why people killed over religion

EVELYN: Evolution debate on a Simpsons video? Please.

ZATI: thank you sir. good call.

EVELYN: Any one else smell that? i smell fresh arguments being brewed up:D

TUMAINI: So it on tv then in bio and i can't get enough of it!

ZATI: And I thought that Homer was a human...

ABEDI: It's spelt "D'oh!"

HARI: I am showing people how I make up to \$900 a day using google and my laptop

NESTOR: stop being nerds and enjoy the damn clip

ZATI: Peace be upon him who follows true guidance and believes in Allâh and His Messenger. I bear witness that there is no god but Allâh Alone with no associate, He has taken neither a wife nor a son, and that Muhammad is His slave and Messenger. I call you unto the fold of Islam; if you embrace Islam, you will find safety (and peace).

EVELYN: WOW! Homer in SPORE!

ERCAN: I can believe that you enjoyed this low quality video, want watch in good quality The Simpsons then go: TVFLAP . COM

ALEXANDR: @rasengetsuga Let's clear some things up--- Evolution has nothing to do with the creation of the earth. Also, evolution doesn't attempt to explain abiogenesis (where the first life came from). Evolution explains how life has developed and diversified SINCE life first appear. There's lots of evidence to substantiate it.

ZATI: r u referring to microevolution or macroevolution?

NESTOR: i once evolved a weird swimming thing in a fish tank at first they were all pink then they got bigger and purple a couple years later they were isolated for a really long time

LOVA: Help! I'm trying to find what dispicable(sp?) thing I said on here about the Homer Evolves clip. Can someone tell me how I can find my own post? Thanks.

ERCAN: This totally reminds me of the rite of spring segment from Fantasia

AFAAFA: Human evolution....here it goesape ---> ape-human---> human-ape---> human---> religious human ----> republican human---> pigs

NESTOR: here's what you think.A rat-----> monkey ----> Your mom -----> you.Truth.Human ----> Human -----> Human who thinks he came from an ape.come on guy, I have more respect for yourself.

ABEDI: @LacocacolamanDo you think this is more sensible or more respectfulGod --> bored god --> even more bored god --> guinea pigs --> dumb humans -->dumb religious -->humans kill each other over god.and what you said is not what I think happened. 500 characters is not enough to teach anyone about the science of evolution (it is not simple like religion) and I believe you wouldnt understand it anyway...So go back to your religion, and come out if you get any smarter...

NESTOR: oh please, my chronological order is just what you believe. so you're saying you are not a decedent of a rodent? to an ape? to a human? sure there's so many intermediates in between but they're in the right order. I would put more apes between your mother and you but 500 characters just isn't enough.I know evolution. trust me I know it :)ha ha ha it's so ridiculous how people seriously believe a creature could change it's heart, lungs and all sorts of anatomy. Oh fantasy :)

LOVA: when you say something like what you said, it is equivalent to you saying "i dont know anything about evolution, but i am going to pretend i do know and i am going to pretend to be smart."the way you say it, evolution sounds like magic, but that isnt the case,you could atleast acknowledge that the vast majority of scientists are smarter than you are....and if evolution was some kind of magic, it would have been rejected long ago.....its religions that live in fantasy

NESTOR: what the hell are you talking about? Im talking about the decedents of species I am completely right in what I said. Trust me it is fantasy. fantasy for big boys with wild imaginations. I guess, You clearly know more than scientist.yes evolution is fantasy.

KAMILA: @Lacocacolamanalright cool man, anything you dont understand is a fantasy ...got it.Btw it is spelled descendants, and not decedents (decedents are those who are deceased ....and oh deceased means dead )I am glad i could teach you something, now throw your bible and learn some science,If evolution is a fantasy, well its still shit a lot better than the moron bible

KAMILA: ha ha ha you guys are so pathetic... aww man i laughed for like 5 minutes. You're right i made a misspelling.wow, man it brought a smile to my face. I wonder how happy you got when I made that misspelling. "I can't understand reason... but at least i didn't misspell a word!"Trust me evolution is as real as the simpsons cartoon. poor guy you have to try and find misspelling rather than trying to come up with some logic.

NESTOR: i bet you had to look that word up in the dictionary

NESTOR: @lacocacolamanare you fucking serious? what do you believe, that man hunted the dinosaurs to extinction? that they were called "dragons"? that the flood accounts for strata, grand canyon, etc? i know you believe these things, because you listen to the FRAUD Kent Hovind. you stupid child. clinging to your pathetic little fairy tale beliefs like a goddam ostrich with its head in the sand. listen fuckwit. there is no scientific conspiracy. there is no controversy. evolution is fact. god is dead.

ERCAN: damn strait

KAMILA: Lacocacolamanyes the process of DESCENDANTS (please note the correct spelling) changing certain features over the process of hundreds of millions of years,o lol how far fetched!it's pretty

obvious god just instantly magicked them up, (yes so much more believable) shut up idiot if you are too stupid to tell I was being sarcastic generally I don't like to insult people's beliefs but when you are so faithful in them that you start acting like an arrogant bitch it's time to intervene

HISHAM: yes I made a misspelling I knew you chimps would jump all over that. you guys never have any valid points so you jump at any tiny mistake anyone makes, no matter how minuscule. yes, in a galaxy far far far away everything is possible. even evolution : s

TUMAINI: ok now I'm confused are we all arguing for the same ideals?

ABEDI: I think you are confused. I don't believe in evolution one bit. yeah I made a misspelling and the guy tried to make fun of me. it just seems more pathetic that is all he has to bring to the table.

HISHAM: Evolution is a load of shit. This cartoon is just taking the piss out of scientists! I love it! lol

KAMILA: and exactly why is it a load of shit? because "god snapped his fingers and made us all"? lol the religious can be so obnoxious (I don't mean to offend you nor any religious person, but if you offend others (like me who study science for a living) then you will have consequences... by the way, think about this: if science is a load of crap, then why are you on this planet which is kept alive by science? such as gravity?!?!?!)

LOVA: what is your criteria for science? it must be observable, testable, repeatable. Evolution is a religion. It takes "billions" of years. A person can't observe, test, repeat that. Gravity is observable, testable, repeatable.

## Scene 5

EVELYN: we are observing evolution every day, eventually we will evolve (if we survive, and along with other animals) to adapt to the consequences of global warming. we are testing it, if we use a biological weapon (such as artificial diseases) we kill animals, and they eventually will evolve. lol it's self-repeating, we don't ever stop evolving, even if we can't tell we are that, and you are stating the ways we form "laws" of physics, evolution isn't a law, it's a fact...

AFAAFA: 1. (omitted from ur response) what is your criteria for science? 2. What is the Scientific Method? 3. When u refer to evolution r u referring to Microevolution, or Macroevolution? I agree 100% that Microevolution is scientific.

NESTOR: I (although I am young) study science for then anything, physics is my strength, followed by chemistry, followed by quantum physics, then quantum mechanics, and at the end of the list, biology... to answer your questions quickly, I'll say: evolution is based on many factors, which came first? chicken or the egg? the egg, because the animal that laid it, evolved to be the chicken, and evolution happens through the offspring...

ALEXANDR: there are 3 numbered questions. please answer one at a time. I don't know which one u r referring to.

ALEXANDR: I was referring to all in one, general, answer

KAMILA: I see the attempt, but first let's define "science"

HARI: (my personal definition) science: 1; study of science; a human attempt to define what is around him/her, if there is no answer, he/she will make one up. science: 1; science; gravity, force, inertia, laws of physics, quantum physics, quantum mechanics. without science (and I mean actual science, not the study of science) there would be no universe, meaning no galaxy, meaning no stars, meaning no solar system, meaning no earth, meaning no life.

TUMAINI: you have contradicting terms. you defined science as "the study of science" in your first statement. then in your last statement, you say "not the study of science" besides that you've used the word "science" in its own definition. based off this omitted definition, you are making a few claims....

ALEXANDR: lol i said my personal definition, the first one is the study of itself, like how in school and university they teach us of gravity and physics, and mechanics, and chemistry, etc. and the second one refers to science itself, like in gravity and physics, not the study of gravity and physics, but the actual gravity and physics. in other words, the first definition is the study of science. and the second science itself

KAMILA: and exactly where did I use "science" in the definition? the first one says science: 1; study of science;... and the second science: 1; science;... I was merely stating what I was going to define when i said "study of science" and when I said "science" then in my final statement, I was explaining my second definition (science: 1; science;) If i hadn't explained it, i would basically just have given some scientific terms.

ERCAN: there is no such thing as micro or macro evolution. only evolution. there is no arbitrary boundary which limits genetic change. the biblical notion of "kind" is meaningless, like the rest of that worthless book. when two populations drift so much that they can no longer mate, a new species has formed. this has been observed many times (look up speciation). let me ask you a question do you believe the earth is 6000 years old?

ZATI: where do you observe speciation? in the fossil record? LOL sure there's limits to genetic change. The cockroach already has the information to defend against pesticides but cannot become immune to my foot. you see losing the ability to mate does have its limits as well. extinction. by the way plants can revert back to their phenotype. i dont know how old the earth is. see the difference is i admit it.

ALEXANDR: you are a mental midget. how could your foot harm a cockroach? it is always in your ignorant mouth. speciation has been observed both in the lab and in the wild. a simple google search will show you that. but i'm sure your "faith" is so strong that you will start making up excuses right away, just like you do for all the fucked up shit in the bible. world-wide flood my ass. what a crock of shit. go get an education in biology, then we can talk. fucking dumb-ass.

AFAAFA: evolution is perfectly testable and every aspect of evolution has been observed thousands of times. almost all scientific fields including genetics, molecular biology, cell theory, biochemistry etc simply wouldnt make sense without evolution.

TUMAINI: there r 7 types of evolution. Cosmic Evolution, Stellar Evolution, Chemical Evolution, Planetary Evolution, Organic Evolution, Macroevolution & Microevolution. I object to all but Microevolution because this is the only testable one. Can u provide any TESTABLE, OBSERVABLE, REPEATABLE examples for the ones i disagree with?

LOVA: @Skad8erateher @Skad8erateher plenty the chihuahua can no longer mate with the great dane. the apple maggot fly to the hawthorn fly the african lungfish lungfish evening primrose kew primrose tragopogon Raphanobrassica the banana maize enough?

ABEDI: non-volcanic mountain formation takes millions of years, yet we have a good theory (plate tectonics) that fits all the data. that is because we can observe the drift, even though it is very slow. the same applies to evolution. we can see the mechanism of evolution, and have even observed speciation. it takes billions of years to go from single cells to mammals, but smaller time scales for more closely related species. you are an ignorant moron.

AFAAFA: You know if you think about it Science is a product of man, just like religion. Also I'm pretty sure electricity is invisible magic. Come on, electrons? I've never seen one before, invisible magic.

ZATI: you can't see an electron because it is part of an atom, according to basic quantum physics, it is impossible to see one, why? because if you where to construct a microscope that could see one, you'd

need multiple lenses, and the last lense, the one that would permit you to see the atom itself, would'nt be visible, why? because you'd see right through it while attempting to see the atom

HISHAM: Ya, well that doesn't disprove my point that you can't see them, therefor it has to be magic. Also magnets are magical, because they attract for no apparent reason. Fields? never seen one.

KAMILA: yes electricity is invisible magicthat's is why we can't see lightni...oh waitWE CAN

HISHAM: What are you talking about? lighting is air turning into a plasma (for no apparent reason) then quickly contracting to make that thunder sound were all so familiar with. Invisible magic.

ZATI: Actually, God didn't even snap his fingers. He simply spoke. However, it is interesting that he didn't simply speak man (male or female) into existence. I find that fascinating!

HISHAM: Oh, yeah! Is SnappyPenguins a religious person? A Christian? If so, it sure doesn't show in the languaged of the post.

KAMILA: the jokes on you, stupid cunt.

TUMAINI: whats the song called ?. xD

HARI: LOL

ABEDI: fuck hulu

ZATI: Spore game lol

TUMAINI: \*evolves alot\* marj"what took you so long"Homer"ugh"

ALEXANDR: Moe forms back LOL : = )

TUMAINI: does anyone know about the intro to the simpsons where they change universes type of thing and they end up in a real life persons bedroom rofl?

AFAAFA: 1:10 lol look at the background

KAMILA: LOL trust youtube to have people arguing about creation and evolution on a simpsons clip

ABEDI: Evolution is a proven fact, its been observed in a lab many times by many peopleThe way it works is a scientific theory, backed up by tons of evidence that can be shown an repeated. Basically we know how it works, but we can't say that is the 100% absolute way it works cuz 1 piece of evidence could disprove any theory.

ERCAN: Evolution on a small scale perhaps, but complex organisms cannot be formed through lesser organisms. Darwin himself stated that the eye (for example) is so complex that it could not form from nothing. Therefore, some form of evolution does exist, but humans did not evolve from individual cells. It is physically impossible and not supported by any scientific evidence. Evolution is supported on a small scale by the way we have adapted dogs to specific traits. We changed them

ZATI: WHATEVER WHATEVER. Who cares if it's only a small scale? It's The Simpsons, jeez.

ALEXANDR: BULL SHIT.if you actually read the book then you would know that darwin then goes on to explain that the eye could have evolved perfectly easily.the eye has evolved at least 40 different times in nature.

NESTOR: The eye has evolved when it is already a part of an organism. It cannot evolve from nothing, as

there is no basis for cellular growth.

ALEXANDR: it can. one photosensitive cell is better than no photosensitive cells. 2 photosensitive cells is better than 1 photosensitive cell.

HISHAM: evolution is only as true as gravity and cell theory is.

TUMAINI: Gravity is a proven fact, been observed and can be tested. The way it works is a scientific theory, so you just proved my point. Cell theory is so far perfect, but new technology is being discovered every day so we can't say we are 100% sure it is true.

EVELYN: you didnt understand my post, read it again.

HARI: MOE DEER LOL

NESTOR: omg hahaha:))

KAMILA: ich glaub der mensch ist durch inzucht entstanden^^

HARI: lmao @ moe devolving!

## Scene 6

ERCAN: heh searching for a guy that will make me go wild

ABEDI: errr.....wrong place to ask?

HARI: voted 1 because of the hulu ad on the bottom. oh yeah and because the simpsons jumped the shark in the 90s.

ABEDI: doh!

HARI: moe lol

HARI: oh Moe, hes kinda cute as a rat thing...

KAMILA: ok can you just watch it and not be all like oh that is not right blah blah

TUMAINI: moe was evolving backwards lol

ALEXANDR: evolving backwards = devolving lol.

TUMAINI: what do you offer in replacement?

KAMILA: I am showing people how I make up to \$900 a day using google and my laptop

TUMAINI: you advertise and sell your body to middle-aged men with small penis's?

HARI: God isnt real...

LOVA: u are rude god is real

ERCAN: nope not real just an joke really

EVELYN: YOU'RE JUST AN ATHEIST!!!

ZATI: then how can you proof that creation is real and i don't wanna hear any shit from the bible

EVELYN: It IS.. Idiot.. Learn science.. Oh wait you dont even know the basic's

TUMAINI: The bible clearly says this aint the way it happened. Bunch of lib nonsense!

ZATI: bible also says god created light before he created stars, so i wouldnt take it to seriously if i were you.

EVELYN: DUDE if evolution aint real how did we came on this planet you dumb fuck

NESTOR: I'm not religious and all, but evolution didn't make earth :\

NESTOR: who said it did?

ZATI: of course it didnt, no one says evolution "made earth", evolution is how life has become diverse through natural selection.

NESTOR: since when

LOVA: me gusto la musica! (y) danny elfman!

KAMILA: hahahhahah hehhehehe that's fun!

NESTOR: lol

LOVA: Let people believe what they want :)

AFAAFA: that hulu banner is so annoying...

EVELYN: 0:40 rofl

EVELYN: "god put us on here then" christian

EVELYN: well that is the religion theory but i don't really like religion

ERCAN: its a bartasaruses rexroflmao

HARI: What took you so long?

AFAAFA: before few minutes watched this The Simpsons video in HD at :TVFLAP . COM

ABEDI: they grow up so fast.. :,D

AFAAFA: haha funny

TUMAINI: jajaja

AFAAFA: LOL

EVELYN: haha i always laugh at how Moe devolves into a lower being.

ERCAN: LOL MOE ^^

AFAAFA: looks like a fatboy slim mtv

HARI: stupid

LOVA: funny but ahh i think thats as close as your gonna get to the truth of evolution

LOVA: You wish...

HISHAM: eave maria mejor imposiblesuperrrrrrrrrrrrrr

HARI: Lol what about theory of Panspermia demonstrated pretty well in the movie Mission to Mars. The theory that an alien species populated or seeded this planet with cell life and from then on we evolved.

HARI: doh doh doh doh doh doh doh

AFAAFA: @HiddenDiam0nds Actually, it's not. It's a perverted term for masturbation

KAMILA: 0:41 it sounds like Godzilla

KAMILA: it is a godzilla sound

KAMILA: no godzillas sound is a high pitch unless your talking about the american version which i think sucks ass

ZATI: No it's the sound for the T-rex in Jurassic Park

### **Scene 7**

HARI: My bad yes the Lisa dinosaur is the Godzilla roar, the Bart one is the T-rex

ABEDI: no godzillas sound is a high pitch unless your talking about the american version which i think sucks ass

HARI: SPORE Game. :)

HARI: love that game

EVELYN: @Hidden Diam-zero-ndsWell then that settles it, you're a moron. Good day to you.

NESTOR: typo you friggin moron

HISHAM: the part where homer is already fully designed and created as a fully functioning cell is 100% accurate gj simpsons

ZATI: Too funny!

LOVA: A white mans inerpretation. Hence no acknowledgment o any ethic evolution what so ever.

ALEXANDR: Actually this was quite accurate. if you discredit the cartoonish styling.

ALEXANDR: Well, as far as I know, we have no relations to monkeys or apes, even though we are very similar.

ALEXANDR: 1. I think they didn't know/they just didn't want to confuse viewers.2. Congrats on bringing race into the issue.

TUMAINI: what took you so long? lol one of the best simpsons couch gag endings EVER!

ERCAN: @RusconiDomAnd who the fuck asked for your opinion?If these people are sad then so are you for debating on there debates.

EVELYN: HeeeeyThis is Jenn from WRXY 105.5 RadioWe have 105 Apple iPads to give out todayAll you need is an email address.Check out my page and get one for yourself. Hurry up cause they are going Fast.\* Free Apple iPads from WRXY 105.5 Radio

ALEXANDR: 0:33 Aaaugh!Moe devolves, lolz.

HARI: Apple is Giving Away FREE iPADS \*\*\*Check my page for Link and InfoThis is NOT Bullshit

KAMILA: evolution or simply created by an exterior being. either way i don't fucking care, its the simpsons, take your debates elsewhere

AFAAFA: Moe xD

HARI: lol @ mo

ERCAN: lol moe

ALEXANDR: @RusconiDom hhhmm if ther is a god then he beat you to it lol

HISHAM: What is the soundtrack?

HARI: do you mean doh?

ALEXANDR: omg religios arguement here too??

TUMAINI: this is a cinematic masterpiece

AFAAFA: What took you so long? ugh...

KAMILA: then whats lisa and barts evolution they died from the meteorite in the story

ALEXANDR: Homer ate Lenny. XD

EVELYN: What?! I thought black jesus created the simpsons....this throws my whole perception of reality into question.

ERCAN: What Happened Before the Big Bang?What caused the big bang?What exploded in the big bang?Send me a message. Go with Christ bra.

ALEXANDR: gasses floating around in spacethe gasses mixedthe gasChrist is a lode of shit

TUMAINI: You ask these questions, but do you have answers to the same/similar questions? What was before God? What created him? How did he create a planet and all life on it in 7 days?

ALEXANDR: I watch The Simpsons all episodes and seasons for free in HQ at:TVFLAP . COM

EVELYN: You people truly have no lives if you're on youtube debating evolution off some damn cartoon, you people seriously need to get a hobby and a real life instead of living some imaginary you tube life

ALEXANDR: i hate it too. people are always debating on youtube no matter what. i cant just watch a video without all these damn annoying comments.

KAMILA: 0:33 rofl! "ghaaaaah!!!"

HISHAM: I love the song they play soooooo much. Seriously, it almost made me cry it's so pretty. Does anyone know if they wrote it, or if it was real? And if I can download it without the sound effects?

LOVA: LOL

ALEXANDR: @operacaity Yeah!

ALEXANDR: jajaja q boludo el moe

NESTOR: Wonder who the dragonfly was supposed to be?

ERCAN: lenny

EVELYN: Looks like Lenny.

AFAAFA: Lenny, I think. Looks like him, at least

ABEDI: Homer: "Actually its Carl. But then again i get them confused. Is Lenny the black one? Im not sure."

EVELYN: Carl's black, Lenny's white. It's Carl Carlson and Lenny Leonard

EVELYN: LENNY !

HISHAM: Lenny

## **Scene 8**

ZATI: leny

EVELYN: Lenny I think...

HISHAM: lennie

ABEDI: Skinner's mom

EVELYN: Lenny

NESTOR: it's beautifull!!

AFAAFA: HOMER-JELLYFISH!!!!

AFAAFA: mmmmmmmmmmm JELLYFISH!!!!

ABEDI: 1:00 LoL Moe is evolving backwards ^^

HISHAM: that is a good one

KAMILA: Why are the christains messing up the world over the theory of stuff The world couldnt be made in watever days and the world is over 9000000years old get over it

ALEXANDR: AppIe is Giving Away FREE iPADS \*\*\*Check my page for Link and InfoThis is NOT Bullshit

AFAAFA: No Shit Free iPads..... iPads You Fuck Retard LEARN TO SPELL OK

LOVA: epic intro..the ebst than i've ever seen \*\_\*

EVELYN: haha moe going backwards was the best

KAMILA: the best part is the beginning with the dividing cells

HISHAM: Evolution? Simpson's did it!

ABEDI: o wow

EVELYN: hahahahah the sigh at the end is brilliant

LOVA: Lol funny

KAMILA: Apple is Giving Away FREE iPADS \*\*\*Check my page for Link and InfoThis is NOT Bullshit

AFAAFA: if u listen closely to the cells some say geto

AFAAFA: this is probably the best intro and it is pretty accruate

HARI: Anyone who agrees in saying ever since "Google" has taken over and bought you-tube, they've royally keep screwing it up, and just are trying to force more adds and commercials through out you-tube. Along with destroying and making the layout of channels hideous.I will stop using you-tube as a petition if the layout does not go back to the way you-tube was originally before google started making it into there experiment for more adds. If you agree copy this comment and pass it on in videos.

ERCAN: Hahaa

EVELYN: cool

ALEXANDR: anyone know the name of the music?

LOVA: moy bueno!

ZATI: I love to watch The Simpsons in HQ for free at :TVFLAP . COM

ERCAN: This is so cool <3

EVELYN: "What took you so long?"

ALEXANDR: lol he eats lenny ^^

ERCAN: @zippo702: Indeed, the words of scientist could not be further from Gospel. I'm sure there are corrupt and lousy scientists in the world, just like there lousy types of everything.I choose, however, to trust a majority of their kind in their discoveries. Some find comfort in religion; many good people, that is good for them. I find comfort in science, and particularly the theory of evolution. That is why I defend it here.On a lighter tone, this is a hilarious clip; great music too.

HARI: I love this intro ^^1:10 xD

AFAAFA: Hahahahahaha Homer as a fish now that was really funny

ABEDI: haha awesome video. what's the song?

HISHAM: I didnt know there would be a atheist-christian fight ever on a simpsons clip. But it happened!

LOVA: How is having a Simpson's style of theory of evolution atheists vs Christians ? There are plenty of Christians, who're smart enough to know that Earth is not 6000 years old and that theory of evolution is not a guess.

EVELYN: one of the best intro!and btw what's with the discussion on evolution in a Simpsons video!?!?  
LOL

AFAAFA: Jellyfish aren't part of chordata.

TUMAINI: we will have had a common ancestor with jellyfish at some point.

ALEXANDR: Typical that something that even mentions evolution starts up a big argument.

HARI: Take THAT non-atheists! ;)

ALEXANDR: nice musical score for a scene intended to be a sight gag

HARI: @zippo702: Here is the difference for you. Scientific theories (and please, first understand the word "theory" before you use it; a theory isn't nonsensical guessing; it is scientific hypotheses that are falsifiable; unlike religious creation myths, which are unfalsifiable: of course no one can prove there is no god; that in itself does not, however prove that there is one.) allow for correction. When scientists find new evidence-- like fossils-- they update the FACTS to strengthen their THEORY.

TUMAINI: xtal84---I know what THEORY is. New evidence doesn't always "strengthen" theories--it can significantly amend or totally discredit widely held theories.Scientists have been caught manipulating data & falsifying conclusions & some have conducted immoral experiments on humans & animals.I am not saying Scientists are do this. I am just pointing out Scientists are neither infallible nor above temptation. They have the same motivations & weaknesses as everyone else & their word is not GOSPEL.

NESTOR: @ zippo. Just because you have no evidence doesn't mean you have to make it up. The main difference between Atheists and the religious is that we aren't scared of not knowing.

ABEDI: Everyone here, talking about shit that no one cares about. You are all idiots.Its the Simpsons, not an Atheist meeting.Besides, a theory has little evidence just like how belief has little evidence of what they squawk.

EVELYN: Just because you don't want to use your brain doesn't mean the rest of us can't. If some of us want to have a debate and refute the claims of creationists we are free to do so, if you don't like that, tough shit. Maybe you are as well keeping away from thinking as you obviously have a lack of understanding of what a theory is anyway.

## Scene 9

HISHAM: So arguing on a youtube video taht is obviously funny is what "smart" people do.Im quite sure Mensa people dont even bother arguing. Even they turnt heir brains off once in a while, especially for a CARTOON.

TUMAINI: It is obvious from your inability to spell or use grammar that you don't use your brain very much at all. So, I think I will continue to use mine or I might end up like you, D'oh.

ERCAN: NOT A FREE IPAD!!! REPEAT: DO NOT VISIT APPLGIRL'S Page, IT IS A LIE.I read all terms and agreements, and it all says:"will charge 9.99 per day for 90 days. (to your cellphone, which you have to input to continue)Trust me, you'll end up paying more than free. More than even just buying an iPad.

AFAAFA: Ohh Dear Lord... Why did you let humans invent Religions... I know... free will and stuff... but you should never let that happened...Religion is like the handbrake of modern society...Do an amendment or something in your Constitution or Book, or Testament, or whatever saying:Thy whom trust in something without proof when one has been given shall perish, and those who believe in something without proof but seeking the knowledge behind it shall visit my house and drink of my wine forever.

ERCAN: Apple is Giving Away FREE iPADS \*\*\*Check my page for Link and InfoThis is NOT Bullshit

ABEDI: why is there a huge argument about science vs god? ITS THE FRIGGIN' SIMPSONS!

HISHAM: Dudes, chill the fuck out. Fighting on the Internet is like the Special Olympics.No matter whether you win or lose, you're still retarded.

TUMAINI: for the ones who do not know what a theory is.a theory is something like.... a bunch of facts explained the right way through hypothesis. this is done through peer review. so the errors get out of the theory.you should know the difference between scientific theory and the theory described by most people.

AFAAFA: So, your claim is that scientific THEORIES are never wrong or amended? Sorry, that theory doesn't hold water. One can easily produce scientific theories that have been disproven or even shown that the research was manipulated. Its theory, not fact.

LOVA: Mate, read "The God Delusion" and it talks about pretty much everything you have said

AFAAFA: no i didnt say theories are never wrong. in fact peer reviewed articles could be wrong long after the article was written.and you will see that the research can be manipulated because of peer review. another scientist that hasnt anything to do with the research will show what is right and wrong.

EVELYN: testing to comment

KAMILA: omg this video is supposed to be for fun and you guys come here to discuss the Big Bang theory or the monkeys theory or whatever...chat "boring" rooms, go there, not a simpsons' youtube video, ok?

KAMILA: Best intro ever!XD

ABEDI: Bestintroevery!XD

LOVA: homerlution^^

HISHAM: i like the part with moe the most !

ALEXANDR: Dude, it's a Simpsons video, take your butthurt arrangements elsewhere.

NESTOR: \*arguments

NESTOR: jajjaaja very funny !!! jaja !!

HARI: omg homer killed lenny

HARI: 0:29 NO! Not Lenny!0:34 Rnyaaaaa0:42 Bartzilla vs Liseggasaurus0:53 Looks like me when i was young :D I miss my tail.1:00-1:03 That explains so much :p.

NESTOR: Why do people have to ruin videos with Religion and Science talk.We're supposed to turn our brains off, not try to show off and make an ass of each other.Besides, Evolution is still a theory and a theory is basically the science version of Belief.Hell, for all we know, God create Apes.Now you dont see the simpsons talking about Religion now do you!.....

ABEDI: Look up the meaning of a scientific theory moron!!!!!!A theory in science is fact supported by evidence!!!!!!!!!!

NESTOR: Oh god its like the special Olympics.A if a theory has evidence then it shouldn't be a theory it should be a fact.Theories have no evidence to back them up, not physical evidence.MORON.

ZATI: What knobcheese22 was trying to say was that in science something has to meet very high standards of evidence and peer reviewing before it's even allowed to be called a "theory". So a "theory" is extremely likely to be true or at least mostly true.

KAMILA: Most of the Simpson's writers are Ivy league intellectuals. The opening montage pokes fun at evolutionary theory--just as the show pokes fun at religion & pretty much every other intellectual pursuit.My point was to correct the misconception that Evolution is FACT. Not even Darwin believed every part of his own theory and much of it has been disproved and discredited.In the true spirit of the Simpsons, this thread has provoked people to use their brains, even if its just to bitch & moan.

ERCAN: Exactly Zippo. All shows poke fun at everything. But the difference with the simpsons is that they dont take it to far like other shows.You're right, Darwin didn't believe his theory all the way. But in many ways it did make sense.Unfortunately for Darwin, his theory drew intense criticism towards himself from many old and modern scientist.People who fight about Science and Religion to prove who is more intelligent are the dumbest people in the world.

AFAAFA: Darwin actually withdrew all support for his theory before he died.

ERCAN: copado

ERCAN: wooow, I had a feeling there was going to be some stupid evolution debate comments....this is a youtube video...

AFAAFA: There's too much THINKING going on around here.....

NESTOR: And thinking is wrong because?

HISHAM: Now you DO realize that in even answering THAT you're forcing me to think, and nay, I won't slip into your dangerous trap! Oh wait a minute - just to figure THAT out I had to think. D'Ohh!!!!

LOVA: of course there must be religion arguments here.....

HARI: But hey guys...Whatever everybody's opinion is...We all love Homer..... right?

EVELYN: Yep, and a damn funny one, but I'll stick to the fact that the humor in The Simpsons also teaches lessons.That's what makes Matt so great, like every humorist, clown or stand up comedian, he makes us laugh, but also makes us think a little bit.That should be a good thing, right?

ZATI: lol 0:33

AFAAFA: please offer a proof that G-d doesn't exist...

AFAAFA: Kinda reminds me of Spore XD

AFAAFA: lol

EVELYN: moe XD

HISHAM: true it is

AFAAFA: Good ironic point this vid..Although most of all made for the pure fact of humor, it still has a lot between the lines. You can laugh about the evolution theory, by thinking on a human scale, like creating a universe in 3 days. Of course evolution can't do that. Ridiculous:3 days So that way of thinking is simply not sufficient. The very fact of cloning (which is actually an invention of nature itself and used everyday in the breeding of all kinds of species) is prove of evolution's existance.

ABEDI: The word is PROOF (not prove). Scientists admit you cannot create something from nothing. Instead of saying G-d did this, they say the original creator. There is nothing in creation outside of G-d, which means 6 days of creation is possible. BTW, science is merely a collection of observations put together to create theories which are modified or discounted as new observations are made--such as Pluto going from a PLANET to just a cartoon character. That is why its called the THEORY of EVOLUTION.

NESTOR: Sorry about the bad English ;- ) and yeah 6 in stead of 3 days, anyway : The big difference however is that a theory is a thought as an outcome of observations, interpretations and tests upon it; (Not waterproof, I admit) where religion is a thought (started ages ago) sold as truth but based upon human desires and fears. Those who chose to live that way.. fine by me, but it's very remarkable that science never forced people to follow, religion did and still does!

NESTOR: I don't believe in religion, I believe in G-d.You are correct in some aspect, some humans created a mythology to provide them comfort, but G-d was not created by man.Scientists do force people to follow their dogmatic faith by ridiculing anyone with opposing opinions. If you do not believe in the THEORY of global warming, you are ostracized. If you do not believe in evolution, you are ostracized.Teachers are not allowed to teach alternatives to the theory of evolution in schools.

ZATI: You can't teach "creationism" because it isn't science and there is separation of church and state. Government funded schools will not teach religion. Scientist force no one to believe in any thing. If you don't not believe in God you are obstracized. A THEORY is an explanation backed by evidence. The Cell and Germ theories are just THEORIES too. Science can be updated and changed, dogmatic? No. Stop confusing your kind with the scientific community.

KAMILA: There is no separation between church and state. That is a fallacy. The constitution says that the state shall not favor one religion of another, it does not say that no religious though can be mentioned in a public school.In some school districts children who believe in G-d are ostracized, in some children who don't are ostracized.Science is dogmatic because they try to enforce their point of view as if its a religion and the scientists are speaking the gospel.

## Scene 10

LOVA: Science is not dogmatic for it is based on facts and evidence and does not make claims that it cannot support.You are misunderstanding the constitution when it mentions that no religion shall be favored over another. For allowing any religion to enter a state institution is favoritism. Religion among students in school is fine. It's the people that represent the state school that are not aloud to infer or endow there own religious views/beliefs into students.

AFAAFA: You have no idea what my kind is, so please don't make statements like that.I don't believe in evolution as a stand alone theory, I don't think Darwin did either. It is only one possibility--that is why they call it the THEORY of Evolution. And I don't even see it as being a very good theory. Instead, I see a combination of things that include G-d, evolution, the big bang, etc.Teaching one THEORY over another and ostracizing those who don't believe---on either side---is not productive.

ZATI: You don't actually know what a theory is do you?

EVELYN: I defined it in another post, but without wasting time arguing, Wikipedia defines a theory as..."proposed explain of empirical phenomena made in a way consistent with scientific method. It is described in such a way that any scientist in the field is in a position to understand, and challenge it."In other words, a theory is an observation or collection of observations that are put together to form a

conclusion, but are amended when presented with conflicting results. What is your point?

HARI: Theories are based on a collection of known facts, but are not beyond being manipulated, amended or disproved & are not necessarily universally accepted. Some people still reject Einstein's Theory of Relativity just as some reject the THEORY of Evolution. Scientific theories are proven, disproven & amended every day. For example, one day Pluto is a planet & the next its just a cartoon character. Do you have a point?

EVELYN: There is no theory of God's existence. So you're in no position to complain that it isn't taught.

TUMAINI: That is nonsensical. The "complaint" was an observation and the observation was that science has adopted evolution as FACT without allowing any other possibilities to be expressed. Cosmologist believe in an original creator who put the process of creation in motion. Read Genesis and the Big Bang Theory for starters...

EVELYN: They did express those creationist views for a LONG time. And in the end, they lost due to lack of evidence. If you want people to take you seriously, you should make some progress in providing data of your own, not just trying to poke holes people's ideas. You want them to teach it? Give them a reason to teach it. You need to EARN respect for your beliefs, you're not entitled to it.

EVELYN: Your argument is nonsensical. First of all Evolution and the Big Bang have nothing to do with one another. Secondly when we refer to something as a theory in science it means something entirely different to the common use of the word theory. It mean's something that is supported by evidence and has survived peer review. It also has to be repeatable. It has to be supported by all the facts and not contradicted by any. Cont~

KAMILA: Yeah like Pluto being a planet, like the Sun revolving around the earth, like electro shock therapy and cigarettes being good for your health and global warming. These are examples of THEORIES that went through peer review and were amended or discounted upon further review. Scientists/Doctors cannot even agree if mammograms are helpful or harmful and last week they announced the same about prostate exams. While you put all your FAITH in science, others chose to put their faith in other places.

ALEXANDR: Evolution & the Big Bang theory are connected like Mac & Cheese. You can have one without the other, but you are left with something incomplete. Evolution is a theory based in part on the nonsensical idea that man evolved from a single celled organism just by dumb luck--with not master plan directing the process. And you need a point of origin. If ruled out the existence of an original creator with evolutionary theory, you need something to explain what the single celled amoebae came from.

NESTOR: Order cannot come from chaos & something cannot come from nothing--these are impossibilities. Cosmologists believe that the creation of the universe leads directly to an original creator. Its more conceivable that the national debt will disappear over the next 24 hours than an explosion creating an expanding universe capable of producing organisms that will evolve into a creature that produces art, poetry, music & engage in moral reasoning without the guidance of an original creator.

ABEDI: Some people bastardize their religion (forcing others to believe, etc.) just as some scientists (like the global warming theorists in the UK) falsify their findings. But, that isn't a proof or an argument against G-d's existence, just against man's inability to follow G-d's laws.

ALEXANDR: As far as it's not really necessary to put some human like label on G-d, (most likely with consciousness), out off the urge to make him/her or rather 'it' look like us, I'm following you there. I believe in the possibility, that some kind of power is the foundation of everything. Just like life, that always wants to continue, all the rest in the universe keeps growing, evolving, continuing etc. It would be weird if that all just came out of nothing.

HISHAM: It would be wrong to think that something does not exist, just because we don't know it, or haven't seen it yet. It is in everybody's best interest to always keep an open mind, scientist or not. The

only thing that bothers me is, that pure fantasy is very often sold as absolute truth! As far as the global warming theory concerns, I'm with you too, I do believe we make it happen faster 'a tiny bit', but it's a natural phenomenon in the first place to be exploited by those with wrong intentions!

ABEDI: Which god? Yahweh who some how loves every one and knows every thing we will do and we can do nothing opposite of what he knows, removing free will. Some how he can do any thing but change the future because it must happen the exact way he knows it, removing the all powerful claim. He some how created a world that became plagued by hate and evil, even though people claim he has none in him. Is that the god you're talking about? If so, that god doesn't exist.

LOVA: Zippo, show me the scientists (proper PhD's only, no pseudo scientists please) that admit you can not create something from nothing. According to reliable research over 90% of US scientists are atheist or agnostic therefore your claim is obviously wrong. Plus, I have already shown you that the argument that things need a creator is intrinsically false yet you keep repeating it.

HARI: Scientists believe it happened in nano seconds or something like it :-)

EVELYN: Apple is Giving Away FREE iPADS \*\*\*Check my page for Link and Info This is NOT Bullshit

LOVA: @WillStrop2008 and @Bobbo110 What you just said is effectively the argument that the universe needs something to create it but this is an easily dismissed argument for if complexity needs creation then that means the creator must have been created and so on and so on. It is a never-ending circle of creators and obviously a false argument. Where as evolution and chaos theory show us that complexity arises from simplicity and no creator is needed.

ZATI: Where in this purely physical world we live in does intellect come into play? Where does our ability to have, what could loosely be termed, this intellectual discussion come from? I failed miserably at school, and science in particular, so be patient with me here. Is it possible to get something from nothing? Is it possible to have chaos if there is nothing? Nil. Zip Zero.

HISHAM: Interesting questions but in a sense irrelevant. Science doesn't say something came from nothing. Evolution says that life developed from simple organisms. Abiogenesis says that life sprung from the primordial 'soup' and physics is able to model the development of the universe back to a tiny fraction of a second after the big bang. There are still a few things science is not fully able to understand yet but with the rate of progress these is no reason to doubt we soon will. No magic needed.

AFAAFA: ... You may note that I answered the 'easy' questions first, lol. The hard question you appear to be asking is where does intellect come from. The simple answer is it evolves but if you also mean what is consciousness then I would need 100's of words to even come close to an answer. Consciousness is one of the hardest things to understand even with all our modern advances and it is still up for discussion. Again, saying 'god did it' is a bad and self-defeating argument and obviously false.

NESTOR: Also, don't be hard on yourself, I wasn't great at school either. I got good grades due to my big ol' intellect but I hated studying and failed the big exams. I have learned more out of school than I did in. If you have the desire to learn and an open mind then one should never stop learning, it is such a waste not too, in fact it is my reason for living. Knowledge is power after all. Plus you have one of the greatest tools for learning ever developed at your finger tips ... the internet. ---->

TUMAINI: ... Just remember to always be at least a tiny bit sceptical and always check sources and corroborating evidence before you make big conclusions.

LOVA: The only scientists who don't understand this are the ones with a limited intellect. All fingers point at an original creator. If something comes from something--then who created that? Call it a primordial soup, or force that created the big bang---call it anything you want. I call it G-d. Chaos cannot produce complex life forms with intellect and reason merely by chance. This points to a master plan of creation--which is yet another way of saying G-d.

TUMAINI: I have just read that 'science' now says it is possible to get something from nothing, theoretically anyway. Little do dads that pop in and out of a vacuum ???? What is not known will always be greater than what is known so science is always in the "dark ages" and this is its fascination, not a fault. God has been referred to as the 'First Will', and I see no conflict in the creation of the universe as described by science and the Will of God making it so.

ABEDI: There is a conflict in that, because there is nothing in this world that prove or disprove any of the 130000 religions - so mixing religious claims into science is in the essence pointless. Philosophical thinking and science goes much better together because they challenge each other and can reach actual conclusions.

KAMILA: Animals have some form of intellect, what they lack is the ability to reason. The ability to reason is a unique character trait that is beyond any conceivable phase in evolution. Thus, the ability to reason is something that must be part of a master plan, not just nature saying DOH!! You cannot derive something from nothing, & a fully reasoning human being cannot be derived from a single celled amoeba just by dumb luck. Something has to be controlling the process. This proves G-ds existence.

NESTOR: How can SOMETHING come from NOTHING? That itself is illogical. Something can only be created by or from something else--thus an original creator. Asking who created the original creator is like asking who created nothing. If chaos is the natural order of the universe, how can order be derived from chaos? Someone needs to impose order for the creation of complex organisms. Professing scientific theories about the creation of the universe devoid of an original creator--is illogical.

LOVA: "How can something come from nothing?" Funny... because that's what Christians believe in. :P

TUMAINI: Zippo, (using the kind of 'simple' language you seem to prefer) ... your argument is that something needs something to create it. Then what created the original something, and what created the something that created the something that created the something and so on and so on and so on? If things have to be created, god is a thing and he must have been created too. If god is not a thing then god doesn't exist.

ALEXANDR: ??? I never said the universe needs a creator. Heck I even said that the universe might have always existed in one form or another. Thus negating the need for a creator. I don't see any reason to believe in gods, but I also don't say that they can't exist.

ZATI: Bobbo, Ok, I respect that view point.

ERCAN: cool!

NESTOR: What is more interesting about this is that Homer was always Homer, he didn't originate from anything else. There was no Homer, and then whoosh bang, there was. Doesn't matter which way you look at it, that's the way of it. I call it the Whoosh Bang theory. Evolution? Whoosh bang, there you was Creation? Whoosh bang there you was I am going to start a movement!

HARI: COOLI think... Maybe... Maybe Homer is God.... LOLYEP That's it.. The video is a sign! Homer is God and Matt Groening is our prophet! Lets start the Homerian movement! LOL (I most sincerely hope, nobody takes this serious, because waiotahi52, I don't know about you, but I would hate to unwillingly become the founder of a new religion, because of a joke! LOL) That would be something, right? Anyway that I think, is basically how it works : God exists, because he was created by man's fantasy!

LOVA: los dinosaurios se extinguieron cuando el hombre que es homero era una rata en 0 minutos y 45 segundos

LOVA: Look more brain washing from the masons!

HISHAM: how is the music called from 1:01

HISHAM: @Bobbo1101. I don't see a difference between a creative force and a sentient God, because the ability to create truly out of nothing is unique. That alone is a kind of sentience (somehow deciding what to create).2. Bang theory is the evidence that the Universe didn't exist before a certain point. All the quantum effects we mentioned earlier, for the record, actually happened after the rather mysterious Planck Era, which lasted the 1st  $10^{-47}$  seconds after the Bang. I did read Hawking's book.

ABEDI: Time is the dimension of change.

ABEDI: I really miss the funny Simpsons like this. They were so great early on then like all shows kind of ran out of steam.

HISHAM: Waitahi you believe tht god made us ha. tht's funny cuz if he puted 2 people on this world then they maked children and then thos adaults maked more so we all ar brothers ? :D fukin idiots who believe in this 7 days i believe to evelotion tht people was made in millions and millions of years evolving in to a higher and intelectual persons who know mybe in few million years theyr will be more advanced persons who will be more powerful and smarter then wee ar now
